5. Special conditions exist such that literal enforcement of the ordinance results in unnecessary hardship, because: (The applicant must establish that because of the special conditions of the property in question, the restriction applied to the property by the ordinance does not serve the purpose of the restriction in a "fair and reasonable" way. Also, you must establish that the special conditions of the property cause the proposed use to be reasonable. The use must not alter the essential character of the neighborhood. Alternatively, you can establish that, because of the special conditions of the property, there is no reasonable use that can be made of the property that would be permitted under the ordinance. If there is any reasonable use (including an existing use) that is permitted under the ordinance, this alternative is not available.

This property is unique in that it is part of the residential zone but the entire block less two houses are owned by the University. The proposed driveway will be 15' feet closer to the intersection than permitted but will be the only driveway on the block. The purpose of the ordinance is to ensure there is sufficient length of road for ingress and egress from the driveway considering the stacking which may occur at the intersection and insure safe sight distances. Enforcement of this provision against this property bears no fair and substantial relationship to the purpose of the particular provision in this instance because of the unique setting of the

property given the campus setting. The proposed location is reasonable as most traffic will exist away from the

intersection. IV. USE VARIANCE ADDITIONAL INFORMATION

Zoning Board Variance Application updated 6/14/2021

1. Granting of the requested variance will not be contrary to the public interest.

This property is going to be redeveloped from existing separate single family lots into part of the University's campus with parking and up to six dormitories for the University's students. Permitting the driveway to be located at the end of the lot near to the intersection allows the University the maximum amount of parking and safest design for parking and dormitory access. Permitting the driveway to be 35' feet from the intersection where 50' feet is required will not materially alter the character of the neighborhood as this neighborhood will be transformed into part of the University's campus with single driveways at either end of the parling area with the driveways spread out from each other, not close to other driveways and yet providing sufficient sight distance visibility to the intersection. The proposed construction will not threaten the public health, safety or welfare of the public as the design of the site will ensure public safety and health and the proposed driveway is accessing a street with light traffic.
